C I EWNTION: Integrin alpha-D/beta-2 is a receptor for ICAM3 and clearing lipoproteins from plaques and in phagocytosis of bloodborne pathogens, particulate matter, and senescent erythrocytes clamper pathogens, particulate matter, and senescent erythrocytes in the blood.

C I SUBMNIT: Heterodimer of an alpha and a beta subunit. Alpha-D associates with beta-2.

Integrins with I-domains do not undergop protease cleavage.
-1- SIMILARITY: Belongs to the integrin alpha chain family.
-1- SIMILARITY: Contains 7 FG-GAP repeats.
-1- SIMILARITY: Contains 1 VWFA domain.

SUBUNIT: Heterodimer of an alpha and a beta subunit. Alpha-X associates with beta-2.
SUBCELLULAR LOCATION: Type I membrane protein.
TISSUE SPECIFICITY: Predominantly expressed in monocytes and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).

Submitted (DEC-1999) to the EMBL/GenBank/DBM databases.

Submitted (DEC-1999) to the EMBL/GenBank/DBM databases.

Insolation of genes selectively expressed by dendritic cells.";

Submitted (DEC-1999) to the EMBL/GenBank/DBM databases.

Interaction interaction during inflammatory responses. It is especially important in monocyte adhesion and chemotaxis (By similarity).

SUBMIT: Heterodimer of an alpha and beta submit. Alpha-X associates with beta-2 (By similarity).

SUBCELLULAR LOCATION: Type I membrane protein (By similarity).

SUBMIN: The integrin I-domain (insert) is a VWFA domain. Integrins with I-domains do not undergo protease cleavage.

SIMILARITY: Contains 7 FG-GAP repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This SWISS-PROT entry is copyright. Novel high affinity integrin polypeptide useful for treating restenosis and parasitic diseases, comprises all or part of variant integrin alpha subunit A domain or variant integrin beta subunit A-like domain.

Claim 21; Page; 55pp; English.

The invention relates to a high affinity integrin polypeptide comprising

```
call or part of a variant integrin alpha subunit A domain or a variant integrin beta subunit A-like domain. The polypeptide, preferably the Collb alpha subunit A domain, where I at residue 312 has been replaced by G or A, F at residue 313 and A at residue 320 have been replaced by C, or V at residue 315 and A at residue 320 have been replaced by C, or V at residue 315 and A at residue 320 have been replaced by C, or V at residue 315 and A at residue 320 have been replaced by C, or V at residue 315 and A at residue 320 have been replaced by C, or V at residue 315 and A at residue 320 have been replaced by C, or V at residue 315 and A at residue 320 have been replaced by C, or CDID or for treating an inflammatory disorder, by contacting a test compound with the polypeptide and determining if the test compound binds to the polypeptide. The integrin subunits are useful for reducing reperfusion injury, immune complexes, restencis and parasitic diseases, to purify variant integrin polypeptide ligands and as bait proteins in the printegrin alpha subunit CDID deletion variant A domain. Note: This variant sequence is not featured in the specification but has been derived from the wild-type protein shown in AAU76847

```
complement activity in vitro. The analogue is generated by substituting a short consensus repeat domain (SCR) or a von Willebrand Factor domain (SCR) or a von Willebrand Factor domain as the consensus repeat domain (SCR) or a von Willebrand Factor domain as the consensus repeat domain (SCR) or a von Willebrand Factor domain as the bund of thuman C2 or CR3. The analogues may be used to regulate the complement system involved in immune and autoimmune responses. Complement activity can account for substantial tissue damage in a wide variety of autoimmune complex mediated syndromes such as lupus erythematosus, themmatoid arthritis, hemolytic anemias and myasthenia gravis. Inhibition of theumatoid arthritis, hemolytic anemias and myasthenia gravis. Inhibition of therapeutic intervention in these cases. Inhibition of complement may also be favorable in cases that involve tissue damage caused by vascular caute shock lung syndrome. In these cases the complement system may contribute to the destruction, cerebral vascular accidents or acute shock lung syndrome. In these cases the complement system may contribute to the destruction, the use of complement system may contribute to the destruction, cerebral vascular accidents or reperfusion injury. In addition, the use of complement system may contribute to the destruction of partially damaged tissue as in novel target specificities could reduce the activity of tissue damaging proteins at sites of inflammation. Complement inhibition is important in the prevention of xenograft rejection (the inhibition of complement by cell-associated and soluble inhibitors is useful in protecting the transplant from damage caused by activation of endogenous complement. The present sequence represents the vWF domain of human factor MAC-1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  THEFFFF
                                                                                                                                                                                                        The invention relates to a novel isolated or recombinant modified integrin protein having extracellular domains of integrin alpha and beta subunits where one of the subunits has one or more mutations, an altered surface feature or an amino acid substitution or internal deletion, extracellular domains of the integrin beta subunit that comprise a mutation that alters a non-cysteine residue to cysteine or extracellular mutation that alters a non-cysteine residue to cysteine or extracellular comparison of integrin alpha and beta subunits. The polypeptide of the invention demonstrates antipsoriatic, thrombolytic, anticoagulant, osteopathic, cytostatatic, immunosuppressive, antiinflammatory, neuroprotective and antisickling activities and may be useful for immunocherapy in order to prevent or treat an integrin-mediated disorder such as an inflammatory disorder, an autoimmune disorder, thrombosis, cancer, osteoporosis, sickle cell anaemia, psoriasis and multiple sclerosis. The current sequence is that of the human integrin alpham such an unitegrin alpham invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                              Novel modified integrin protein having extracellular domains of integrin alpha and beta subunits or integrin alphaII and beta3 subunit, useful for treating integrin mediated disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         144 CPQEDSDIAFLIDGSGSIIPHDFRRMKEFVSTVMEQLKKSKTLFSLMQYSEEFRIHFTFK 203

                                                                                                                                                                                                         Diagnosing or monitoring transplant rejection, e.g. heart, kidney, liver, pancreas, pancreatic islet, lung, bone marrow or stem cell transplant rejection, in an individual, comprises detecting the expression level of
                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to diagnosing or monitoring transplant rejection, e.g. cardiac or kidney transplant rejection, in an individual comprises detecting the expression level of one or more genes. The methods, system and kits are useful in diagnosing or monitoring transplant rejection, e.g. heart, kidney, liver, pancreas, pancreatic islet, lung, bone marrow or stem cell transplant rejection, xenotransplant rejection or mechanical organ replacement rejection, in an individual. The method is also useful in assessing the immune status of an individual. The methods are also useful in diagnosing and monitoring diseases that involve the immune system, e.g. rheumatoid arthritis, lupus, inflammatory bowel diseases, multiple sclerosis, HIV/AIDS or viral, bacterial or tungal infection. The present sequence represents a protein that is encoded by the mRNA of the invention.

Mac-1 alpha subunit is involved in the response to inflammation, i.e. recognition of and migration to sites of inflammation. It also attaches to cellular substrates as part of this function making it useful in visualising endothelial tissue. Mac-1 is a member of the Integrin Gene superfamily. (Updated on 25-MAR-2003 to correct PR field.) (Updated on 2

Compounds that modulate alpha-d binding could be used to treat diseases such as type-I diabetes, atherosclerosis, multiple sclerosis, asthma, psoriasis, lung inflammation, acute respiratory distress syndrome and rheumatoid arthritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

```
This invention relates to a modified integrin-I or integrin I-like domain polypeptide comprising at least one disulfide bond so that the domain stabilised in a desired conformation. The polypeptide of the invention may have antiinflammatory or immosupersesive activities. The polypeptides of the invention have an open conformation and are useful simmunogens to produce antibodies that selectively bind to integrin I-domain; and for identifying a modulator of integrin activity, or of interaction of an integrin and a cognate ligand. The polypeptide of the invention, or antibodies (preferably anti-LFA-1 antibody) is useful for treating or preventing an integrin mediated disorder which is an inflammatory or autoimmune disorder in a subject and for inhibiting the binding of an integrin to a cognate ligand such as Crohn's disease, nephritis; human immunodeficiency virus (HIV), myocardial infarction,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Modified integrin-I or integrin I-like domain polypeptide useful as a immunogen to produce antibodies specific to polypeptide, comprises a disulfide bond such that polypeptide is stabilized in a desired
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Disclosure; Page 109-112; 112pp; English.

Integrins are a class of membrane-associated molecules that participate in cellular adhesion. Integrins are made up of an alpha subunit and a beta subunit. One class of human integrins are restricted to expression in white blood cells and have an integrins. Leu-CAMS, leukcintegrins or beta2 subunit: the leukcoyde integrins. Leu-CAMS, leukcintegrins or beta2 integrins. Beta2 integrins have an important role in immune and inflammatory responses. The present protein sequence is the human integrin alpha subunit CD11b. This sequence responsit is alpha d (AAA60014 and AAB07359). The present sequence has approximately 60% identity to the protein sequence of alpha d. The approximately 60% identity to the protein sequence of alpha d. The caberrant alpha d function eng. Type I diabetes, atherosclerosis, multiple sclerosis, asthma, psoriasis, lung inflammation, acute respiratory (LAD). In addition, anti-alpha d monoclomal antibodies may be used in the inflammation of macrophage infiltration at the site of a central nervous system injury. The monoclonal antibodies can also be used to detect and

diagnose Crohn's disease

Sequence 1153 AA,

selected from ICAM-R or VCAM-1 (intracellular cell adhesion molecule, vascular cell adhesion molecule). The method is useful for promoting locomotor accovery, inhibiting locomotor damage, limiting locomotor impairment, or limiting autonomic and sensory dysfunction following spinal cord injury. In particular, the spinal cord injury comprises compression of the spinal cord. The antibodies are also useful for reducing inflammation at the site of a central nervous system injury. The specification also details the identification of Beta2 integrin alphaD cobns and proteins, for use in raising the antibodies. Beta2 integrins are implicated in diseases such as LAD (leukocyte adhesion deficiency, inflammatory response, diabetes, multiple sclerosis, arthritis, graft atherosclerosis, inflammatory bowel disease, Crohn's disease, ulcerative colitis, immune complex alveolitis and leukaemia. The present sequence is a Beta2 integrin alpha subunit sequence included for comparison with the

The invention relates to promoting locomotor recovery, inhibiting locomotor damage, limiting locomotor impairment, or limiting autonomic and sensory dystunction following spinal cord injury by administering an anti-alpha d (Beta2 integrin apphas subunit) monoclonal antibody to a spinal cord injury victim. The method also involves the use of a ligand

Use of an anti-alpha-d monoclonal antibodies for promoting locomotor recovery, inhibiting locomotor damage, limiting locomotor impairment, or limiting autonomic and sensory dysfunction following spinal cord injury.

WPI; 2002-463260/49.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    유
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           g
                                                                                                      domain proteins, wherein the alterations to the protein occur in at least two noncontinuous regions. Specifically the the variant integrin I domain proteins are structurally biased to exist in the open conformation, thereby altering the binding ability of the protein. The invention also comprises mucleic acids encoding the variant integrin I domain proteins. The integrin I domain proteins and nucleic acids are useful for treating. preventing or suppressing integrin related inflammatory and immunological glorders (e.g. rheumatoid arthritis). The variant integrin I domain proteins and nucleic acids can also be used for treating, proteins and nucleic acids can also be used for treating ischaemia/ reperfusion (e.g. hypovolemic shock); infarction; cerebral shock; viral infection; and cancer. The variant integrin I domain nucleic acids and proteins may be used in gene therapy, as vaccines and to screen for alpha subunit of integrin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

The invention relates to a high affinity integrin polypeptide comprising all or part of a variant integrin alpha subunit A domain or a variant integrin beta subunit A-like domain. The polypeptide, preferably the CD11b alpha subunit A-like domain. The polypeptide, preferably the CD11b alpha subunit A domain, where I at residue 312 has been replaced by G or A, F at residue 313 and A at residue 320 have been replaced by C, or var residue 313 and A at residue 320 have been replaced by C, is useful for determining if a test compound is a candidate compound for binding to CD11b or for treating an inflammatory disorder, by contacting a test compound with the polypeptide and determining if the test compound binds to the polypeptide. The integrin subunits are useful for reducing skeletal muscle injury, for treating disorders caused by ischaemiant expertusion injury, immune complexes, restenosis and parasitic diseases.
                                                                                                                                                                                                                                                                                                                                                                                                           Human; integrin alpha subunit; A domain; CD11b; integrin beta subunit; A-like domain; inflammactory disorder; skeletal muscle injury; restenosis; ischaemia-reperfusion injury; immune complex; parasitic disease; mutant; antinflammatory; vasotropic; antiparasitic; vulnerary; gene therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel high affinity integrin polypeptide useful for treating restenosis and parasitic diseases, comprises all or part of variant integrin alpha subunit A domain or variant integrin beta subunit A-like domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      to purify variant integrin polypeptide ligands and as bait proteins in two-hybrid or three-hybrid assays. This sequence represents a human integrin alpha subunit CD11b variant A domain. Note: This variant sequence is not featured in the specification but has been derived from the wild-type protein shown in AAU76847
                                 /label= Gly, Ala
/note= "Wild-type Ile substituted by Gly or Ala"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DB 5; Length 191;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Homo
                                                                                                                                                                                              g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a high affinity integrin polypeptide comprising all or part of a variant integrin alpha subunit A domain or a variant conference at the subunit A-like domain. The polypeptide, preferably the confidence authority A-like domain. The polypeptide, preferably the confidence authority and A at residue 332 has been replaced by C or A residue 315 and A at residue 320 have been replaced by C, or V at residue 315 and A at residue 320 have been replaced by C, or C or determining if a test compound is a candidate compound for binding to C D11b or for treating an inflammatory disorder, by contacting a test compound with the polypeptide and determining if the test compound binds CC to the polypeptide. The integrin subunits are useful for reducing skeletal muscle injury, for treating disorders caused by ischaemian reperfusion injury, immune complexes, restenosis and parasitic diseases, to purify variant integrin polypeptide ligands and as bait proteins in two-hybrid or three-hybrid assays. This sequence represents a human integrin alpha subunit CD11b deletion variant A domain. Note: This variant sequence is not featured in the specification but has been constituted from the wild-type protein shown in AAU76847
                                                                                                       Human; integrin alpha subunit; A domain; CD11b; integrin beta subunit; A-11ke domain; inflammatory disorder; skeletal muscle injury; restenosis; ischaemia-reperfusion injury; immune complex; parasitic disease; mutant; antiinflammatory; vasotropic; antiparasitic; vulnerary; gene therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  EFONNPNPRSLVKPITOLLGRIHTATGIRKVVRELFNITNGARKNAFKILVVITDGEKFG 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a high affinity integrin polypeptide comprising all or part of a variant integrin alpha subunit A domain. The polypeptide, preferably the CD11b alpha subunit A-like domain. The polypeptide, preferably the CD11b alpha subunit A domain, where I at residue 312 has been replaced by G or A, F at residue 313 and A at residue 320 have been replaced by C, or V at residue 315 and A at residue 320 have been replaced by C, or V at residue 315 and A at residue 320 have been replaced by C, is useful for determining if a test compound is a candidate compound for binding to determining if the test compound binds to the polypeptide and determining if the test compound binds to the polypeptide. The integrin subunits are useful for reducing skeletal muscle injury, for treating disorders caused by ischaemiareperfusion injury, immune complexes, restences and parasitic diseases, to purify variant integrin polypeptide ligands and as batt proteins in two-hybrid or three-hybrid assays. This sequence represents the human

The present invention relates to generating a specific binding partner to a peptide, encoded by a genomic DNA fragment or an expressed sequence tag (EST). A nucleic acid molecule encoding a fusion protein is expressed in a host cell to allow the formation of inclusion bodies comprising the fusion protein, the inclusion bodies are isolated and a specific binding partner is generated. The specific binding partners generated are useful for identifying and characterizing naturally occurring proteins e.g. as immunoglobulins or fragments in immunoassays
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          genomic

Sequence 4, Application US/09945265

Patent No. US20020123614A1

GENERAL INCORMATION:

APPLICANT: Springer, Timothy A.

APPLICANT: Shimaoka, Motomu

APPLICANT: Shimaoka, Motomu

APPLICANT: Lu, Chafen

TITLE OF INVENTION: MODIFIED POLYPEPTIDES STABILIZED IN A

TITLE OF INVENTION: DESIRED CONFORMATION AND METHODS FOR PRODUCING SAME

FILE REFERENCE: CBN-002CP

CURRENT APPLICATION NUMBER: US/09/945,265

CURRENT FILING DATE: 2001-08-31

PRIOR PILING DATE: 2000-09-01

NUMBER OF SEQ ID NOS: 4
